Send Image for Delete Graph Processing when Delete to remove Relationship from SKU

Consider that SKU has image relationship, and you wish to delete that image. When the image is deleted, the relationship on the SKU pointing to the image must be deleted. The following process explains the required steps to configure the business rule and a graph process configuration to achieve this.

The following are the steps to send image for delete graph processing:

- Understand Business Requirement
- Define Business Rules
- Map Business Rules
- Verify Business Rule

Understand Business Requirement

Consider an SKU that has an image associated with it. Now, if you want to delete the image. Once the image is deleted, you would need to remove the relationship on the SKU that is now pointing to this deleted image. This is achieved by a combination of a graph process model and a business rule.

Sample Business Scenario

```
IIF[IsEntityDeleted[],SendEntityForGraphProcessing["image_hasimages_sku_delete"],false]
```

Note:

Click here to know how to set up the graph process model configuration. After this setup is done, when the image is deleted, using Graph Processing and the Business Rule, the relationship of that image with the SKU gets deleted automatically.

Define Business Rules

To send image for delete graph processing:

1. On the navigation menu, click **Configurations** > **Data Governance & Rules** app.

   Result: The **Data Governance & Rules** page is displayed with **Data Governance Summary**, **Upload or Download Governance Model Files** and **Task Progress Summary** widgets.

2. In the **Upload or Download Governance Model Files** widget, click **Download**.

   Result: The Download dialog box is displayed with a confirmation message.

{company_proprietry_image}

3. Click **Show Task Details**.

   Result: The **Task Detail** page is displayed.

4. Click the **Download** icon to download the excel spreadsheet.
5. Open the downloaded **Data Governance App Data Model** excel file and select **Business Rules** sheet to define the business rule.
6. In the **Business Rules** sheet, perform the following:

{company_proprietry_image}

- Enter **sendimagefordeletegraphprocessingwhereimagehasrelationshipwithsku** business rule name in the **NAME** column.
- Select **computationpostprocess** business rule type from the **TYPE** column drop-down.
- Select the execution mode as **any** from the **EXECUTION MODE** column drop-down. For more information see Populate Business Rules.
- Select **Yes** from the **IS ENABLED** drop-down to enable the business rule.
- Select **Published** business rule status from **STATUS** column drop-down.
- Define the business rule to send image for delete graph processing in the **DEFINITION** column.
    - Verifies whether the entity is deleted or not.
    - If entity is deleted, then send the image for graph processing.

- Enter **Send Image For Delete Graph Processing where Image Has Relationship With Sku** in the **DISPLAY NAME** column.
- Enter the help text in the **HELP TEXT** column.
- Select **No** from the **ENABLED ON MIGRATION** column drop-down to disable the business rule during migration.

Map Business Rules

Upon defining the business rule, you must map the **sendimagefordeletegraphprocessingwhereimagehasrelationshipwithsku** business rule to the entity in the **Governance Mapping** sheet. To map the business rule:

1. In the **Data Governance App Data Model** excel file, select **Governance Mapping** sheet.

{company_proprietry_image}

- Enter **image** entity type in the **Entity** column.
    - Select the execution mode from the **EXECUTION MODE** column drop-down. For more information see Populate Business Rules.
    - Select **Yes** from **IS Enabled** column drop-down to enable the business rule for the mapped entity.
    - Select **Published** business rule status from the **STATUS** column drop-down.
    - Enter **sendimagefordeletegraphprocessingwhereimagehasrelationshipwithsku** business rule name in the **MAPPED BUSINESS CONDITION** column.
    - Enter **delete** in **WHEN TO TRIGGER?** column.
    - Enter the sequence of execution for the business condition or rule in the **Execution Order** column.
    - Select **Yes** from the **Ignore Change Context?** column to ignore if there are any changes to the specified context during execution.

2. Upon mapping the business rule, save the spreadsheet.

3. Upload the **Data Governance** sheet back to the application. For more information, see Upload or Download Governance Model Files.

   Result: The excel file is uploaded successfully.

Verify Business Rule

On successfully uploading the **Data Governance** sheet, you can verify the computation post-process business rule as follows:

1. On the navigation menu, click **Search** > **Search Thing Domain** app.

   Result: The **Search** page is displayed.

{company_proprietry_image}

2. Enter the search criteria in the **Search** bar and press **Enter**.

   Result: The **Search** page is displayed with the list of entities matching the search criteria.

{company_proprietry_image}

3. Click the SKU from the list for which you wish to view the UOM attribute value.

   Result: The **Entity Manage** page is displayed with the SKU details.

{company_proprietry_image}

4. Click **Images** from the **Assets** grid of the **Summary** tab.

   Result: The **Images Assets** tab is displayed.

{company_proprietry_image}

5. Click the image link.

Result: The **Entity Manage** page is displayed.

6. Click **Delete** icon.

   {company_proprietry_image}

Result: A confirmation **Are you sure?** message is displayed. Click **Yes** to delete the image. A confirmation message **Image is deleted** is displayed.

7. Click **Refresh** icon. To view the deleted image.

   {company_proprietry_image}

Similarly, you can send the image for delete graph processing, where image has relationship with product by using the below business rule:

```
IIF[IsEntityDeleted[],SendEntityForGraphProcessing["image_hasimages_product_delete"],
false]
```
